

Risk Assessment Way Forward

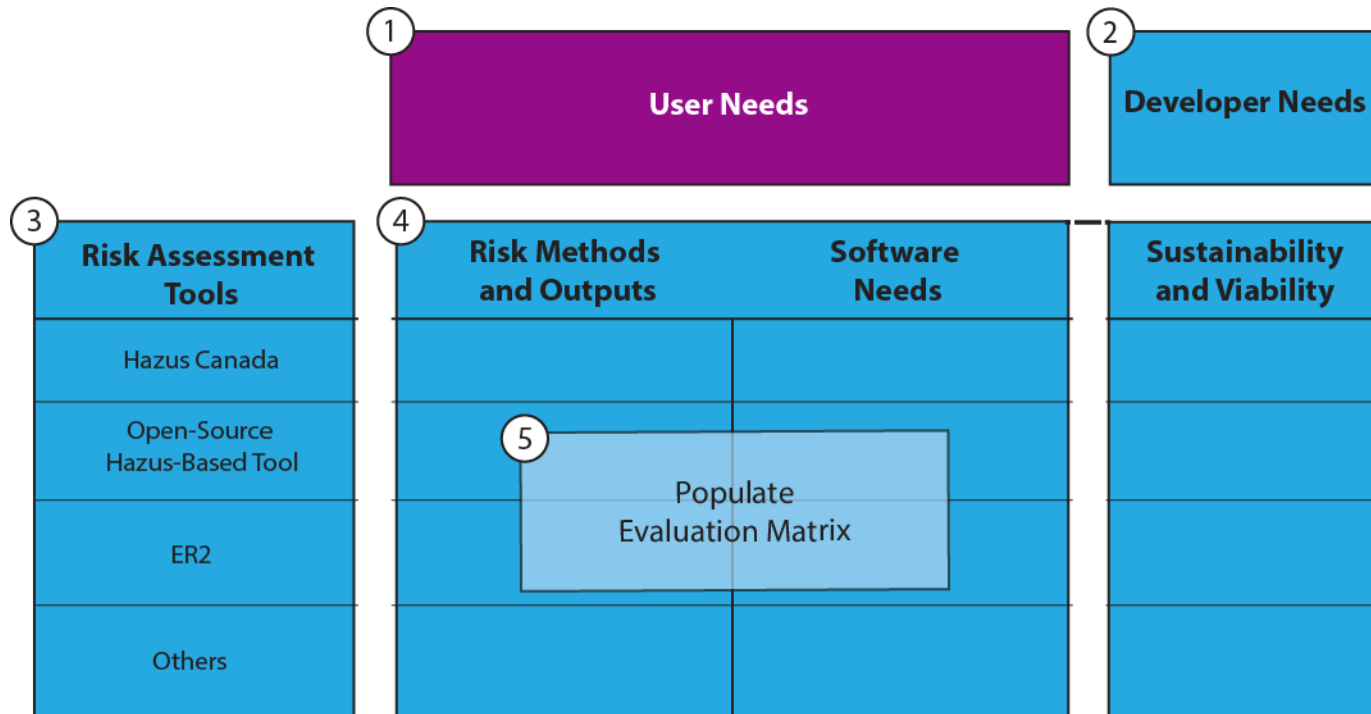

Some Context

- National Disaster Mitigation Plan has mandate to “identify and mitigate high-risk flood areas”
- National Scale Geohazard Risk project has mandate to “support research of best practices” for risk mitigation
- NRCan currently supports risk assessment tools, including Hazus

Time is right to check-in and evaluate the existing risk tools

Risk Assessment Way Forward

Project Plan

Between now and 5th February we will be looking for users (current or potential) of risk assessment tools in Canada – YOU!!!

We will be conducting 30-minute interviews (by phone, internet, in-person) to help define user needs. These will be used to develop the measures that will be used to compare tools

Next month we will be targeting Hazus Canada users to learn more about its strengths and weaknesses

Risk Assessment Way Forward
